Service contracts

Billing period

The billing period for a service contract is a full year, starting from the date on which the contract is concluded. Service contracts concluded at a later date for additional licenses are initially charged pro rata for the remaining period until the next due date for the service contract for the first license, and subsequently on a yearly basis together with the service contract for the first license.

Contract amendments

Contract amendments are possible at any time. Any cost adjustments that may be necessary are not effected until the next due date.

Price adjustments

LU-Engineering Software GmbH reserves the right to adjust prices as required.

Contract termination

The service contract may be terminated by either party without stating any reasons up to one month before the expiry of the contract term. Otherwise, the contract is automatically extended for another year. The minimum duration of the contract is one year.

Additional provision

The contractual services refer to the currently valid and the previous version of the main program. If there are more than two upgrade levels between the version you are using and the current version or if a newer version of the main program superseded the previous version more than two years ago, the Basic or Pro service contract will automatically change over to a hotline support-only contract without delivery of updates. The annual prices correspond to the prices in the regular contracts.

Partial invalidity

Should any individual provisions of this contract be wholly or partially invalid, this fact shall not affect the validity of the remaining provisions. The parties agree that the invalid provision shall be replaced by an effective provision which is acceptable to both parties and which comes closest to the objectives intended by the invalid provision. We hereby point out that we store data necessary for the settlement of transactions.

Updates and upgrades

Updates are minor improvements and innovations within a program generation, for example going from version 1.02.077 to 1.03.101. It should be pointed out that jumps are possible relating to an update. This means that it is not necessary in these cases to acquire all interim versions. Since the main programs are strongly linked to the additional modules, an update always relates to the entire program suite. With a service contract, you obtain the updates automatically via the homepage of LU-Engineering Software GmbH.

Unlike updates, upgrades are program versions which have either been very extensively revised or completely reprogrammed. Jumps are not possible with upgrades. This means that Version 1.xx of a program cannot be directly updated to Version 3.xx if a Version 2.xx exists. All intermediate versions must be observed and acquired. A service contract entitles you to preferential upgrade terms.

As a service contract customer, you have absolute priority over non-service contract customers with regard to the handling of your enquiries. You also receive unrestricted access to the updates provided online, so your product is always guaranteed to be state of the art.
